

Differential-based DEEPFAKE SPEECH detection

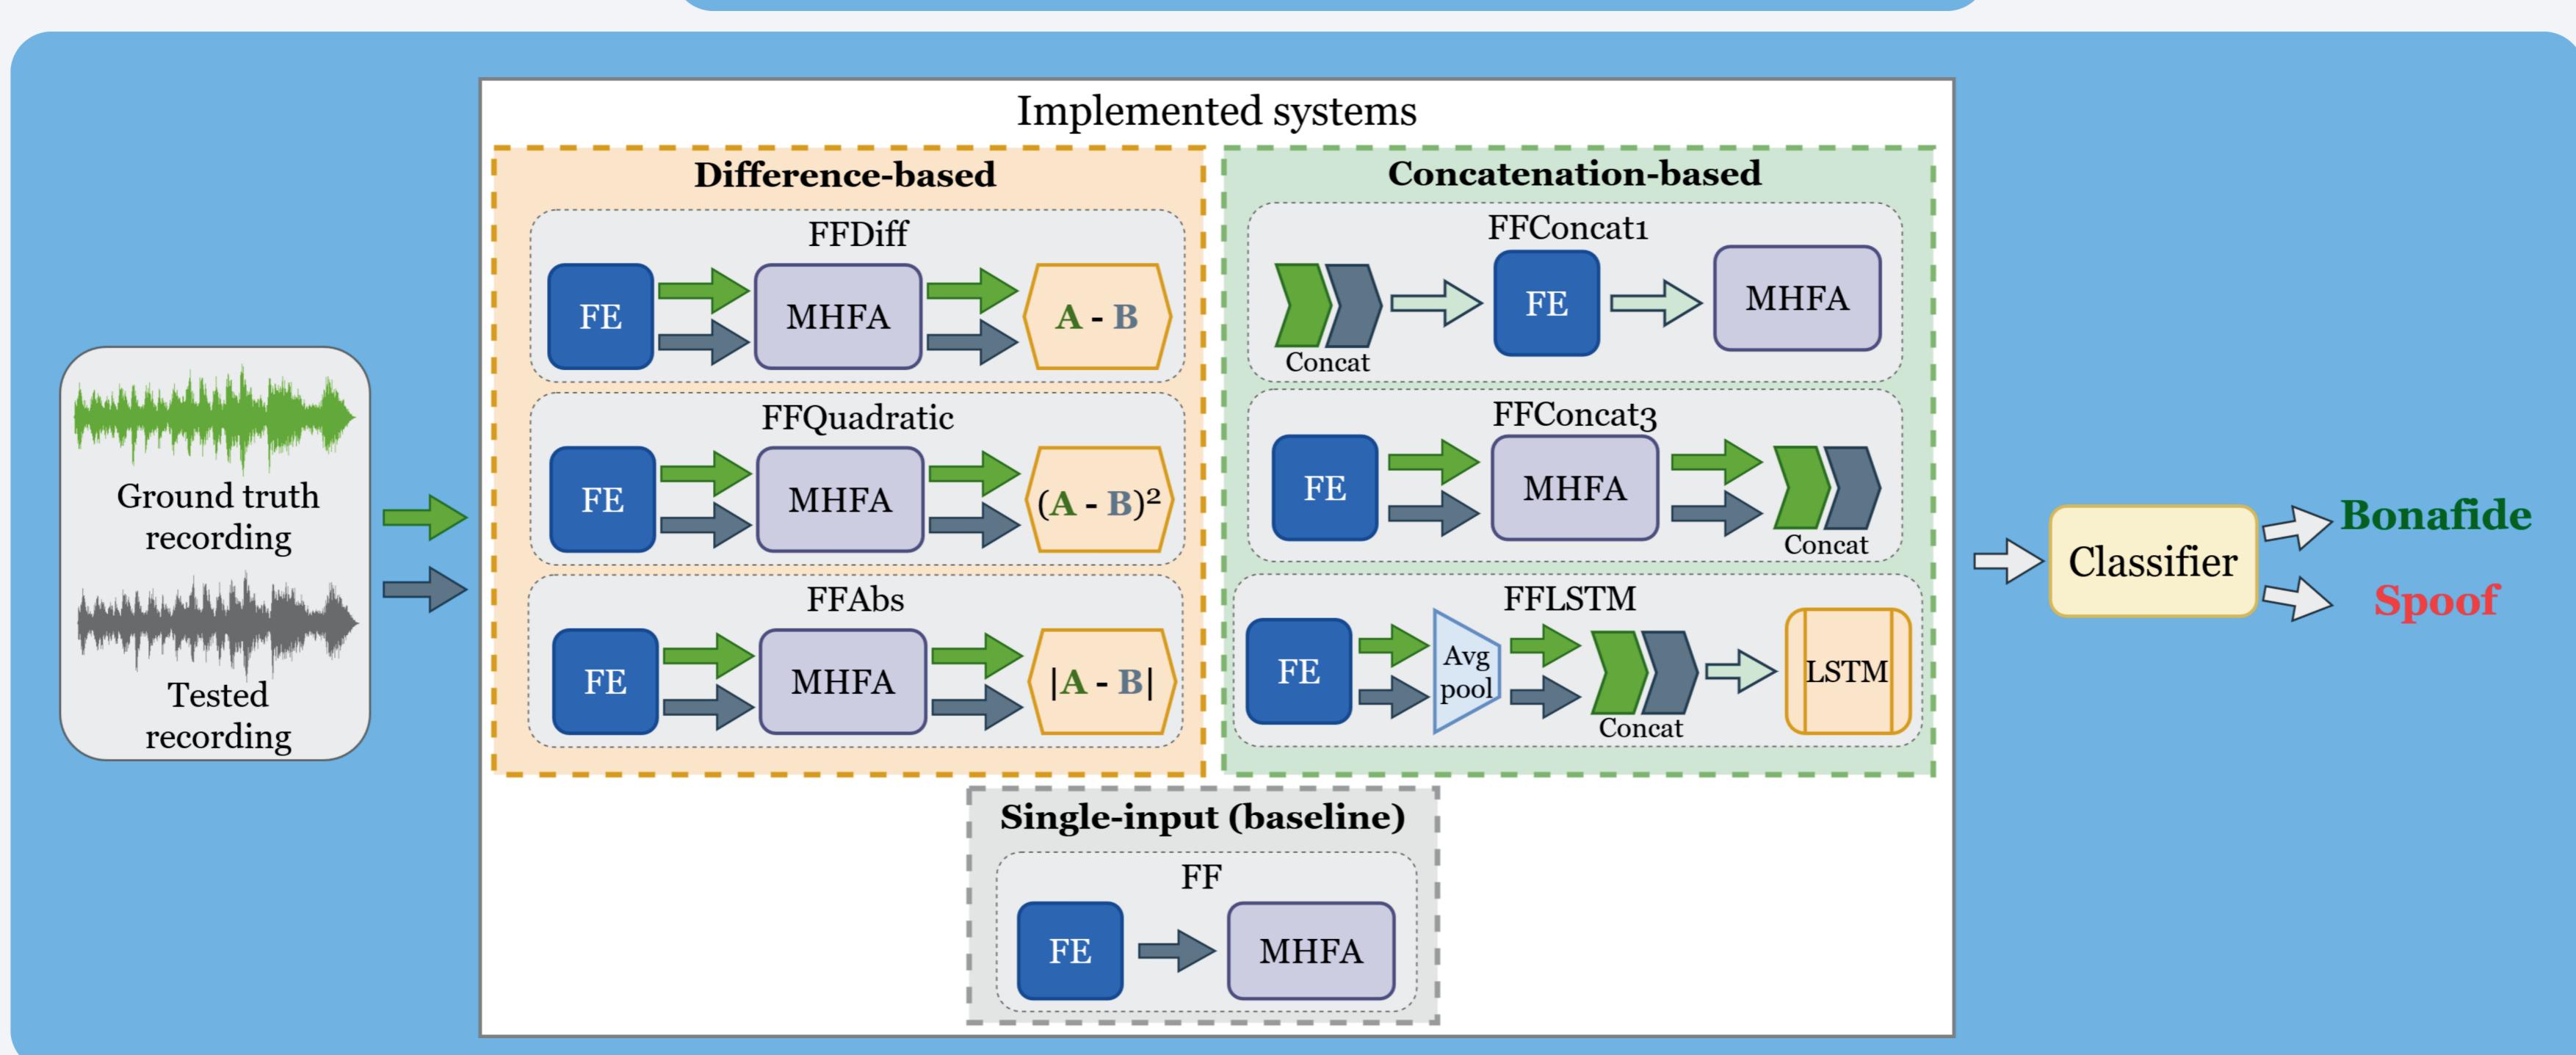

MOTIVATION

- High-quality realistic deepfakes
- Brand-new approach
- Pairs of recordings
 - Tested and ground-truth
- Prove authenticity
- Expose fraud

TECH & DATA

- PyTorch
- Self-Supervised Learning (SSL)
- Multi-head factorized attentive pooling (MHFA)
- ASVspoof challenge datasets (2019 + 2021)
- In-the-Wild dataset of circulating deepfakes

IMPLEMENTATION

RESULTS

Equal Error Rate (EER)	Best to date	Implemented
ASVspoof2019 [1]	5.74% (single T04) 0.22% (ens. T05)	0.18% (FF) 0.22% (FFConcat3)
ASVspoof2021 [2]	15.64% (T23) 2.85% (W2V2 + GAT)	5.51% (FFConcat1) 3.1% (ensemble)
In-the-Wild [3]	33.94% (RawNet2)	12.36% (FFConcat3) 9.76% (ensemble)

Equal Error Rate (EER)	Voice Conversion	Text to Speech
<i>Single input</i>	6.99% (FF)	1.22% (FF)
<i>Difference based</i>	6.15% (FFDiff)	1.38% (FFQuadratic)
<i>Concat based</i>	4.98% (FFConcat1)	1.29% (FFConcat3)

- State-of-the-art performance
- Pair input is more robust to overfitting

- Pair input significantly better for detecting VC
